Summary Information

Repository	American Philosophical Society
Creator	Clarke, Hans Thacher, 1887-1972
Title	Hans Thacher Clarke Papers
Date [inclusive]	Circa 1903-1973
Call number	Mss.B.C55
Extent	3.0 Linear feet 3,500 items
Extent	Circa 3500 items (3 linear ft.). From Finding Aid: 7 boxes & 12 notebooks, 5,000 items (1912-1972)
Location	LH-B-15-6; LH-SB-Black Case-26 (OS Awards, diplomas)
Language	English
Container	1-6
Abstract	<p>This collection contains correspondence, reports, notes, and notebooks. Clarke's participation in various organizations is documented, including the American Philosophical Society, American Chemical Society, American Otological Society, and the American Society of Biological Chemists. His chemistry research is detailed in thirteen notebooks, 1903-1971 (the 1903 volume is on photographic chemistry and processes). There is also one volume on the clarinet, for Clarke was an expert clarinetist. The personal and family correspondence is principally with Mrs. Dorothy Clarke Middleton and Mrs. Agnes Helfreich Clarke.</p>

Background note

Hans Thacher Clarke studied chemistry at University College, London (1896-1905), worked for the Eastman Kodak Co. in Rochester (1914-1928), and was a professor of biological chemistry at the College of Physicians and Surgeons of Columbia University (1928-1956). Among other researches, he was involved in the production of penicillin in the U.S.

Hans Thacher Clarke (1887-1972) was born in Harrow, England. From 1896-1905, he attended University College London School, and went on to enter the University as a student of chemistry. There he studied under William Ramsey, J. N. Collie and Samuel Smiles. He also attended courses in physiological chemistry taught by R.H. A Plimmer and physiology with E. H. Starling, but found these studies boring at the time. After receiving his B.Sc. in 1908, Clarke continued to do research at University College under the direction of Smiles and A.W. Stewart. In 1911, he was awarded an 1851 Exhibition Scholarship which he used to spend three semesters with Emil Fischer in Berlin and one semester with A.W. Stewart at Queen's College, Belfast. On his return he was granted the D.Sc. from London University in 1913.

Clarke's father had long been associated with Eastman Kodak Company as European representative. George Eastman occasionally consulted Hans on chemical matter and, at the beginning of World War I, when the company was forced to produce photographic chemicals which they had previously imported from Germany, they turned to Hans for help. Clarke moved to Rochester, N.Y. in 1914 only to discover that he was the sole organic chemist there! The correspondence retained from these years consists largely of requests for chemicals, arrangements for visits, and reports of Clarke's consultancy work which involved scanning the chemical literature (a task which continued to occupy him for two days a week until 1969!) [Box 3, 3 files, c.60 items, 191-1963]

At the suggestion of his friend Henry D. Dakin, Clarke accepted a position offered him as Professor of Biological Chemistry at Columbia's College of Physicians and Surgeons in 1928. When he first took on the post he received much advice from his friend and mentor, A.W. Stewart on how to start one's own academic department (Box 7, c. 20 items, 1926-1935). While at Columbia, Clarke took a personal interest in graduate students, of whom he demanded rigorous qualifications prior to admission (a list of the PhD.s granted from 1913 to 1957, with their positions as of 1955, is in Box 2, "Biochemistry at Columbia"). As time went on, Clarke found less and less time to devote to his own research. Other responsibilities interrupted his work, including the 1953 memorial lectures for his friend Henry Dankin, and subsequent arrangements for this event at Adelphi College every year to 1965 (Box 1, Adelphi College, 3 files, 1957-1965).

In 1956, Clarke retired from Columbia, but continued his research and some lecturing and conducting student seminars at the Biochemical Laboratories of the Graduate School of Yale University, to which he had been invited by Joseph Fruton. This arrangement was disrupted when the Medical School needed the space Clarke was occupying in the laboratory to accommodate newly appointed members of its staff in 1964 (Box 5, Dean Vernon W. Lippard). Clarke was able to continue his research at the Children's Cancer Research Foundation Center in Boston until 1970, when ill health forced him to retire.

One of the jobs Clarke valued most was his position, in 1951-1952, as Science Attache to the American Embassy in London. His post permitted him to work closely with Sir Robert Robinson, with whom he had edited a major book on research in penicillin in 1949, after prior government service as Assistant Director of the Office of Scientific Research and Development in 1944 placed him in charge of coordinating penicillin production in the U.S. (Box 4, Paul D. Foote, and Box 6, 1959-1960, concern a controversy on patenting of production methods in U.K. and U.S. which casts light on Clarke's role in the penicillin production effort).

Clarke's activities in the NAS, including records of his receipt of the King's medal in 1948 and vitae of nominees from 1942 to 1971 have been retained (Box 6). His activity as chairman of the Rochester section of the American Chemical Society (1921), of the New York section (1946) and of the Organic Chemistry Division (1924-25) as well as his work on the Committee on Professional Training, and the Garvin Award Committee, are well documented (Box 1, 6 files). Clarke was also the president of the American Society of Biological Chemists in 1947, but the collection contains very little of interest in this regard (Box 2, 5 files, 50 items, c. 1942-1963).

Clarke's activity on grants allocation committees is well documented. As a member of the Otological Society he served on a grants committee from 1956-1962 (Box 1, 9 files). As Chairman of the Merck Fellowship Board of the National Academy of Sciences in 1957, Clarke retained such interesting correspondence as a letter from Warren Weaver to A.N. Richards recommending the use of the Merck money for two or three research professorships at \$15,000 p.a. rather than only for post-doctoral research, and a letter from Kenneth B. Raper at Wisconsin approving of this proposal which was passed on to the Merck Board in March 1957 (Box 5).

Clarke was in much demand for his talents as a lucid writer and was called on to serve as editor or referee throughout his career. He served on the editorial board of Organic Synthesis from 1921 to 1932 (Box 6, 3 files), of the Journal of Biological Chemistry from 1937 to 1951, and as associate editor of the Journal of the American Chemical Society from 1928 to 1938 (JBC, Box 4, 8 files up to 1960, also, Box 3, Clarke's 50th Anniversary article on the Journal).

Scope & content

D. ca. 5000 items. Various sizes. Presented by Mrs. Clarke; June 7, 1973.

Much of the collection concerns Clarke's family life and his involvement with the arts. Clarke, an expert carinetist, was frequently asked to give concerts as local halls (see notebook 11).

Seven files of correspondence from unknown individuals are largely concerned with personal affairs.

Of Clarke's correspondence, the most interesting exchanges are contained in letter from A.W. Stewart (Box 7), Sirl Julian Huxley (Box 4, 17 items, 1958-1972), Sir Geoffrey Taylor (Box 7, c.30 items, 1955-1972), J. Murray Luck (Box 5, 9 letters, 1956-65), Samuel Smiles (Box 7, c.15 items, 1926-34), and members of his family, Mrs. Agnes Helfreich (c.40 items) and Mrs. Dora Middleton (c.70 items).

In addition to correspondence, the collection contains Clarke's chemical laboratory notebooks dated from 1928 to 1971 and some printed material, such as the testimony of Philip handler tot he Subcommittee of Science, Research and Development in the U.S. House of Representatives in 1971. Some routine memo materials, such as those accompanying chemicals sent to Stephen Nagy's M.I.T. analysis laboratory from 1957 to 1964 (Box 5, 35 items) is scatter through the collection. [composed by Margaret Miller, Archives Coordinator, Survey of Souces for the History of Biochemistry and Molecular Biology].

Box 2 contains 4 files, c. 200 items, 1957-1964 relating to the Journal of Biochemical Preparations. List of Editorial board members of Advisory Boards, 1957, 1958, 1959, 1961, 1964. Some drafts of chemical procedures to be included in several of the volumes.

Other Descriptive Information

The appointment of Hans Thacher Clarke as chairman of the biochemistry department of Columbia's College of Physicians and Surgeons in 1928 signaled a disciplinary shift away from a clinical orientation toward a biochemistry firmly rooted in organic and physical chemistry. In urging him to assume the

chairmanship, James Conant wrote to Clarke, "Here is a Medical Group that at last have seen the light and want a straight organic chemist to run the show" (May 23, 1928).

Clarke's background in academic and industrial organic chemistry had had little connection to medical problems. A protege of William Ramsay at University College in London, and later a student of Emil Fischer, Clarke specialized in the synthesis of proteins. During World War I and until his move to Columbia, Clarke engaged in research and development of photographic chemicals at Eastman Kodak, retaining a consultantship with Kodak until 1969. During these years Clarke acquired a reputation among organic chemists as a superb organizer of research.

His administrative skills and ability to recognize talent contributed to the growth of Columbia's biochemistry department, which by the 1940s had become one of the largest and most influential in the United States.

During the 1930s, Clarke opened his laboratory to refugee biochemists, among them E. Brand, Erwin Chargaff, Z. Dische, K. Meyer, D. Nachmansohn, R. Schoenheimer, and Heinrich Waelsch. Unfortunately, the correspondence does not reflect the scope of these activities.

Clarke, Hans Thacher, Miscellaneous Notes

1

[Box 3]

Speech given at the Annual Meeting of the American Institute of Chemists, N.Y. Chapter, 1954. Personal materials - outline of H.T. Clarke's career and education sent to the ACS News Service 1946. Congratulations and awards: Certificate of Merit for service to science during WWII awarded by the OSRD; King's Medal for service in the cause of freedom, 1948. Biographical of Clarke's up until 1954; and biographical data for the Annual Report of the Dept. of Biochemistry, Yale University, May 1957 (50 pp).
